

BETTER MOBILE GEO COMPLIANCE IN CI/CD

Continuously build, test, monitor and respond with Mobile Geo Compliance and 300+ other defenses in Android & iOS mobile apps in one platform in CI/CD.

DELIVER MOBILE GEO COMPLIANCE AT DEVOPS SPEED

Mobile DevOps pipelines use systems to drive rapid, automated and continuous integration, delivery and release cycles of Android & iOS apps. Appdome's Unified Mobile App Defense platform lets you do the same, using a factory model to build, test, monitor and respond with Mobile Geo Compliance in mobile apps, fast. Here's what you get by combining Appdome with CI/CD:

RAPID RELEASE & DELIVERY, MOBILE GEO COMPLIANCE

Getting geo compliance in mobile applications right requires releasing dozens of unique defenses in Android and iOS apps fast. With Appdome, you do just that. Instead of needing engineering resources and work, you build Android geo compliance features in Android apps on-demand. From the CI/CD, trigger the build command in Appdome and release geo compliance in mobile apps either all at once or in an iterative release process to respond to new threats as they emerge and match the needs of the business instantly.

CONTINUOUS SECURITY FOR MOBILE APPLICATIONS

Mobile apps and operating systems change constantly. Coding languages for mobile apps change regularly. New APIs, frameworks, and capabilities are added and updated in mobile apps continuously. Appdome automatically adjusts and adapts each mobile geo compliance feature to the changes in the updated mobile app. Release-by-release, no manual work, retooling, or coding change are needed to make mobile geo compliance features work in the new app. Instead, Appdome does that for you and provides continuous security across all mobile app versions and releases with ease.

CONTINUOUS DETECTION & RESPONSE

DevOps requires real-time data and feedback on each iterative release of a mobile app. Appdome provides real-time data and feedback on each mobile geo compliance and other defenses in the mobile app. With Appdome, mobile brands and organizations monitor all attack vectors impacting the mobile app, revealing the impact of each defense and the total active attack surface in real-time. Armed with this data, brands click-to-add new defenses or update enforcement models in existing defenses to keep the mobile app, business and users safe.

COMPLIANCE TRANSPARENCY & CONTROL

Continuous compliance transparency and control over each step of the build, test, and release lifecycle for mobile apps and defenses alike is critical. Without Appdome, compliance is a leaky bucket and gaps arise. Appdome provides enterprise-grade (1) access, version, and change control, (2) role-based and team entitlements, and (3) tracking for each mobile defense choice, change, detection, and enforcement event. Build by build, each mobile app is Certified Secure™ compliant in the CI/CD pipeline.

"BEST OF SUITE" COST SAVINGS & CONSOLIDATION

Appdome offers unparalleled cost consolidation and TCO savings for mobile geo compliance and other defenses in mobile applications. With Appdome, mobile geo compliance features are delivered without resource dependencies or compatibility limitations. In addition, mobile geo compliance features are instantly interoperable with 300+ other defenses offered via the Appdome platform. Eliminate point products, multi-vendor integration risk and complexity, and streamline release cycles for mobile applications and mobile app defenses alike.

FULL MOBILE GEO COMPLIANCE FEATURE COVERAGE

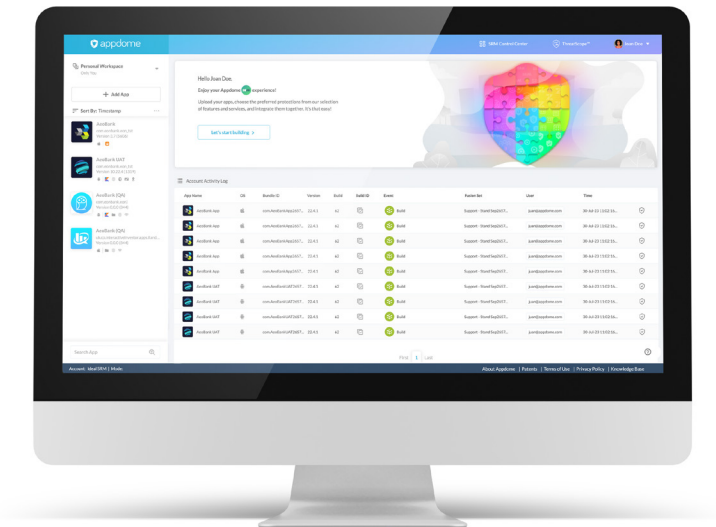

Mobile geo compliance is critical for KYC and user validation for compliance and anti-fraud objectives. Deliver comprehensive geo compliance without burdening mobile engineering:

- **Detect Location Spoofing:** Protect apps from instrumentation, libraries and frameworks used to spoof geolocation data in Android and iOS apps.
- **Detect Fake GPS Apps:** Block the use of fake GPS apps that attackers use to manipulate location, deceive users and defraud brands.
- **Block Untrusted VPNs:** Block untrusted VPNs from being used with your app, allowing brands to enforce geo restrictions and prevent data-in-transit from being compromised.
- **Detect SIM Swaps:** Detect SIM swap attacks, where attackers hijack legitimate users' phone numbers by swapping the SIM or eSIM to a device the attacker controls.
- **Catch Fake Users:** Detect virtualization or emulated environments, along with auto clickers and keystroke injection, to prevent synthetic fraud involving fake events and actions.

Mobile geo compliance defenses are often part of a larger mobile app defense strategy. Combine the above geo compliance features with any or all of Appdome's 300+ other mobile app defenses including mobile app security, anti-fraud, anti-malware, anti-cheat, anti-bot and more.

ONE SOLUTION FOR ALL YOUR MOBILE APP DEFENSE NEEDS.

Appdome's Unified Mobile App Defense platform provides a one-stop shop to protect your mobile apps, save money on mobile app defense, and deliver beautiful user experiences when attacks happen.

THREATSCOPE™ MOBILE XDR

ThreatScope™ Mobile XDR provides mobile brands, developers and cyber professionals extended detection and response (XDR) for Android & iOS mobile apps. ThreatScope Mobile XDR uses dedicated sensors inside mobile apps, not a separate agent or app on the end user's mobile device. These sensors provide real-time, continuous monitoring of 1000s of unique attack vectors, giving mobile brands real-time visibility into the entire range of threats and attacks impacting their mobile app and users. As an XDR, ThreatScope also provides the power to respond to attacks instantly build-by-build, and release-by-release. Inside ThreatScope, organizations can (1) see and analyze the top mobile app threats and attacks impacting the mobile channel, (2) prove the value of the Appdome defenses deployed in mobile apps (3) make data-driven decisions of what protections to deploy in each release, and (4) create customized views and comparisons to report on threats and attacks impacting different parts of the mobile business.

ABOUT APPDOME

Appdome is the mobile app economy's one-stop shop for mobile app defense. Appdome is on a mission to protect every mobile app in the world and the people who use mobile apps in their lives and at work. Appdome provides the mobile industry's only fully-automated, Unified Defense Platform, powered by a patented coding engine, used by mobile brands to eliminate complexity, save money and deliver 300+ Certified Secure™ mobile app security, anti-malware, anti-fraud, MOBILEBot™ Defense, Geo Compliance, anti-cheat, MiTM attack prevention, code obfuscation and other protections in Android and iOS apps with ease, all inside the mobile DevOps and CI/CD pipeline. Appdome's Unified Mobile App Defense platform also comes with Threat-Events™ for UX/UI Control and ThreatScope™ Mobile XDR. Leading financial, healthcare, mobile games, government and m-commerce brands use Appdome to protect Android and iOS apps, mobile customers and mobile businesses globally.

Appdome holds several patents including U.S. Patents 9,934,017 B2, 10,310,870 B2, 10,606,582 B2, 11,243,748 B2 and 11,294,663 B2. Additional patents pending.

UNIFIED MOBILE APP DEFENSE

Appdome's patented Unified Mobile App Defense platform provides mobile developers, cyber security and fraud teams a centralized automation, monitoring and control center for protecting mobile apps. With Appdome, choose, build, test, release and monitor any or all of Appdome 300+ mobile app security, anti-fraud, anti-malware, anti-cheat, anti-bot, geo compliance and other defense features in Android or iOS apps with ease. Maintain full compliance control over the defense lifecycle and enjoy complete compatibility with the entire tech stack used in mobile development, DevOps, and DevSecOps.

THREAT-EVENTS™ CONTROL FRAMEWORK

All of Appdome's runtime and dynamic protections come enabled with Threat-Events™, Appdome's in-app attack intelligence and control framework. Threat-Events empower developers to read/write from the Appdome Security Framework™, gather data on each attack inside the app and use the detection and defense data to beautiful user experiences when each attack occurs.

CERTIFIED SECURE™ DEVSECOPS CERTIFICATION

Build-by-build, mobile apps are Certified Secure™ to guarantee the mobile app security, anti-fraud, anti-malware, anti-cheat, anti-bot, geo compliance and threat intelligence features are embedded, active and protecting the mobile app. Cybersecurity and mobile dev teams use Certified Secure™ as a continuous record of compliance and as the DevSecOps artifact to clear mobile apps for release and save money and time vs. using code scans and penetration tests in the release process.
