

IOS JAILBREAK DETECTION FOR MOBILE APPS

Use AI to continuously build, monitor, and respond with Jailbreak Detection in iOS apps with ease.

WHY APPDOME

Mobile development increasingly relies on AI and automation to drive rapid and continuous integration and delivery of new and updated features into iOS apps. With Appdome, you can utilize a single factory model for new features and iOS Jailbreak Detection in one unified pipeline, maintain agility, and save money.

RAPID RELEASE, IOS JAILBREAK DETECTION

Getting iOS Jailbreak Detection right requires releasing a complex array of iOS Jailbreak Detections in every release of an iOS app. With Appdome, a system builds these iOS Jailbreak Detection features in the app as a standard part of the CI/CD pipeline. Your pipeline, or CI/CD, triggers the Appdome build process. Once triggered, Appdome generates the iOS Jailbreak Detection code and integrates it into the mobile apps in minutes, all without any SDK, manual coding, or engineering work.

ZERO-MAINTENANCE, IOS JAILBREAK DETECTION

Mobile apps and operating systems change constantly. Coding languages for mobile apps change regularly. New APIs, frameworks, and capabilities are added and updated in mobile apps continuously. Appdome automatically updates the iOS Jailbreak Detection features. Release-by-release, there's no manual work to maintain or refactor the iOS Jailbreak Detection features. Appdome maintains the iOS Jailbreak Detection features for you.

REAL-TIME DETECTION & RESPONSE

DevOps requires real-time data and feedback on each feature released in a mobile app. Appdome provides real-time data and feedback on each iOS Jailbreak Detection feature added to the mobile app. Monitor all cyber, fraud and other attack vectors impacting the mobile app, reveal the impact of each defense, and click-to-add new defenses or update enforcement models in existing defenses to keep the mobile app, business, and users safe.

GUARANTEED IOS JAILBREAK COMPLIANCE

As a platform, Appdome builds, tracks and records each configuration, change, build, and release of iOS Jailbreak Detection in iOS apps. To guarantee compliance, Appdome provides enterprise-grade (1) Certified Secure™ DevSecOps certification for each iOS Jailbreak Detection build, (2) defense version and change control, (3) role-based access and team entitlements, (4) tracking for each admin, configuration, change, build, and release, and (5) real-time data on each detection and enforcement event. This ensures that mobile teams have the visibility and control needed at all times.

BEST-OF-SUITE CONSOLIDATION & SAVINGS

Appdome offers unparalleled operational and cost savings. With Appdome, mobile teams can solve iOS Jailbreak Detection and other defense objectives while eliminating engineering work, manual validation, and maintenance efforts. Appdome includes over 400 click-to-add Android and iOS security, anti-fraud, API, and Identity protection offerings, allowing mobile teams to easily eliminate multiple point products, multi-vendor integration complexity, and duplicative license costs.

FULL IOS JAILBREAK DETECTION SUITE

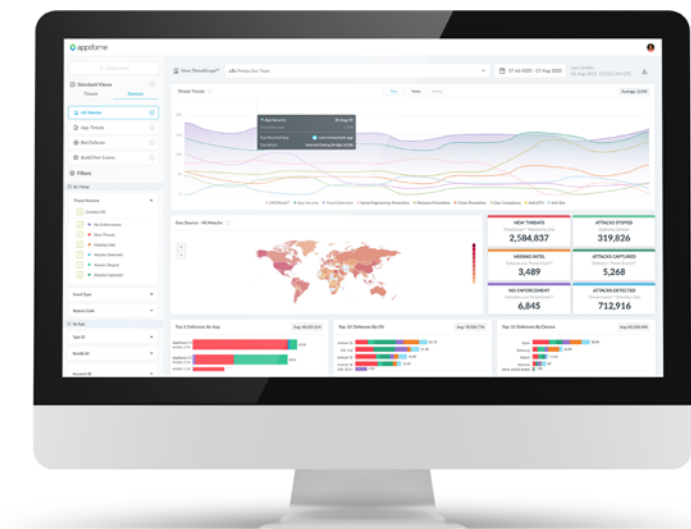

Attackers Jailbreak iOS to gain administrative privileges, change the file system, disable security protections, and compromise apps. Appdome provides a comprehensive set of iOS Jailbreak Detection features for iOS apps, including:

- **iOS Jailbreak Detection:** Block users attempting to run your application on a jailbroken device.
- **Self-Modifying Detection:** Detect Jailbreak hiding modules that modify themselves at runtime to evade detection.
- **Detect SU Binaries:** Detect super user binaries that attackers use to escalate privileges and elevate their ability to compromise apps.
- **Prevent Jailbreak Detection Bypass:** Prevent the use of tools hackers use to bypass, evade, or disable Jailbreak protections, such as FlyJB, Liberty Lite, and other Jailbreak tools, including CheckRa1n, Unc0ver, and Cydia.
- **Prevent Jailbreak Malware:** Prevent malware that relies on Jailbreaking to carry out and enhance attacks.

Use these and other Appdome defenses in a variety of out-of-the-box enforcement modes or plug into Appdome's Threat-Events™ intelligence framework to gain real-time threat intelligence and full control over the user experience in your app when jailbreaking is detected.

UNIFIED DEFENSE FOR THE MOBILE BUSINESS.

Appdome leverages the power of AI to provide a one-stop shop to protect your mobile business. Eliminate point products, unify your mobile defense strategy, save money, and deliver the right user experience when attacks strike.

PROTECT APPS, APIS & IDENTITY IN ONE SOLUTION

With Appdome, you can automate the work out of delivering iOS Jailbreak Detection and 400+ defenses in your mobile business. Appdome provides granular attack detection and defense control for the widest range of mobile threats in the industry, including anti-fraud, anti-bot, anti-malware, deepfake, ATO, social engineering, geo compliance, API, and Identity protection. Use Appdome's threat-signals to inform your mobile app, identity provider or mobile backend when mobile device, application, or user threats are present. Or, leverage Appdome's in-app defense options to design the best protection model for your business.

THREAT-EVENTS™ INTELLIGENCE FRAMEWORK

Threat-Events™ is an in-app intelligence and control framework designed to empower mobile brands to gather detailed meta data on each attack and use that data to deliver the right user experiences when an attack occurs. With Threat-Events™, mobile developers can read from/write to the Appdome Security Framework™, leverage threat data on demand, and tailor and control enforcement to fit the

threat posed. Threat-Events™ can be configured with Appdome's Threat Scores™ to get device and/or transaction-based risk scoring from Appdome.

THREATSCOPE™ EXTENDED THREAT MANAGEMENT (XTM)

ThreatScope™ XTM combines threat detection, investigation, and response for Android & iOS apps into one solution. Appdome-protected mobile apps send real-time mobile device, app, and threat data and telemetry for 1000s of unique attack vectors to each brand's ThreatScope™ instance (no separate profile or app required). From there, mobile brands can use ThreatScope's powerful SecOps AI Agent and analytics engine to investigate and respond to attacks. ThreatScope also provides an AI-generated Mobile Risk Index™, to benchmark the mobile business' defense posture against other brands and businesses in the industry and region.

AI-NATIVE PROTECTION & COMPLIANCE

Appdome uses AI to create a true continuous defense pipeline for your mobile business. Appdome's AI codes all defense and threat intelligence features into mobile apps, instantly accommodating app changes and updates easily. Appdome's AI also validates all defenses, delivering a Certified Secure™ record of compliance in the CI/CD pipeline, allowing mobile brands to save money and time vs. code scans and pen tests in the release process. Appdome's AI also helps brands investigate, monitor, and respond to threats pre-emptively and proactively, so the business is always protected and always compliant – no matter what.

ABOUT APPDOME

Appdome's mission is to protect every mobile business and user in the world from scams, fraud, bots, and attacks. Appdome's patented AI-Native XTM Platform is designed to protect every aspect of mobile business now and in the future. From mobile DevOps to mobile applications, networks, APIs, and Customer Identity, Appdome uses AI to generate Android & iOS defense plugins for 400+ mobile app security, anti-fraud, bot defense, anti-malware, geo compliance, social engineering, deepfake and Customer Identity defenses on demand. Appdome also uses AI inside its ThreatScope™ Mobile XTM, to continuously calculate a Mobile Risk Index™ for businesses and applications as well as rank and preempt attacks in real-time. In Appdome's Threat Resolution Center™, Agentic-AI provides customer support and care teams a quick and easy way to provide end-user threat resolution and remediation. Appdome's Threat-Events™ framework gathers threat and attack metadata, and can be used to inform the application, application SDKs and back-end network components when threats are present or to create customized threat responses inside Android & iOS apps. As a platform, Appdome functions as a continuous compliance center, tracking all builds, changes, teams, users, defense configurations, events, and more for quick and easy audit of the mobile defense lifecycle.

Appdome holds several patents including U.S. Patents 9,934,017 B2, 10,310,870 B2, 10,606,582 B2, 11,243,748 B2 and 11,294,663 B2. Additional patents pending.
